

REAL TIME COMMUNICATION SYSTEM POWERED BY AI FOR SPECIALLY ABLED.

TEAM ID:PNT2022TMID42258

INTRODUCTION:-

1.1 PROJECT OVERVIEW:

The project aims to develop a system that converts the sign language into a human hearing voice in the desired language to convey a message to normal people, as well as convert speech into understandable sign language for the deaf and dumb. We are making use of a convolution neural network to create a model that is trained on different hand gestures. An app is built which uses this model. This app enables deaf and dumb people to convey their information using signs which get converted to human-understandable language and speech is given as output.

1.2 PURPOSE:

In our society, we have people with disabilities. The technology is developing day by day but no significant developments are undertaken for the betterment of these people. Communications between deaf-mute and a normal person has always been a challenging task. It is very difficult for mute people to convey their message to normal people. Since normal people are not trained on hand sign language. In emergency times conveying their message is very difficult. The human hand has remained a popular choice to convey information in situations where other forms like speech cannot be used. Voice Conversion System with Hand Gesture Recognition and translation will be very useful to have a proper conversation between a normal person and an impaired person in any language.

2. LITERATURE SURVEY:-

2.1 EXISTING PROBLEM:

As far, Differently-abled people face discrimination in everyday life. It is difficult for them to communicate with normal people and vice-versa. So many are trying to solve this and give solution by converting sign language into audio and audio(speech) to sign language using Artificial intelligence -neural network, speech recognition, CNN, NLP but it is very tedious to develop into REAL-TIME APPLICATION. We have tried to provide solutions for this existing solution.

2.3 PROBLEM STATEMENT DEFINITION:

Problem Statement (PS)	I am (Customer)	I'm tryingto	but	Because	Which makes mefeel
PS-1	DEAF-MUTE PEOPLE	TO SOCIALIZE WITH OTHERS	THEY CANT COMMUNICATE WITHOUT SIGN LANGUAGE	OF THEIR IMPAIRMENT	UNDERRATED AND INFERIOR TO NON-DISABLED PEOPLE.
PS-2	NON- DISABLED PEOPLE	COMMUNICATE WITH DEAF- MUTE PEOPLE	BUT IT VERY COMPLEX TO COMMUNICATE WITH THEM	IT IS DIFFICULT TO LEARN SIGN LANGUAGE	NOT ABLE TO MAKE FRIENDLY CIRCLE WITH THEM

3.IDEATION AND PROPOSED SOLUTION:-

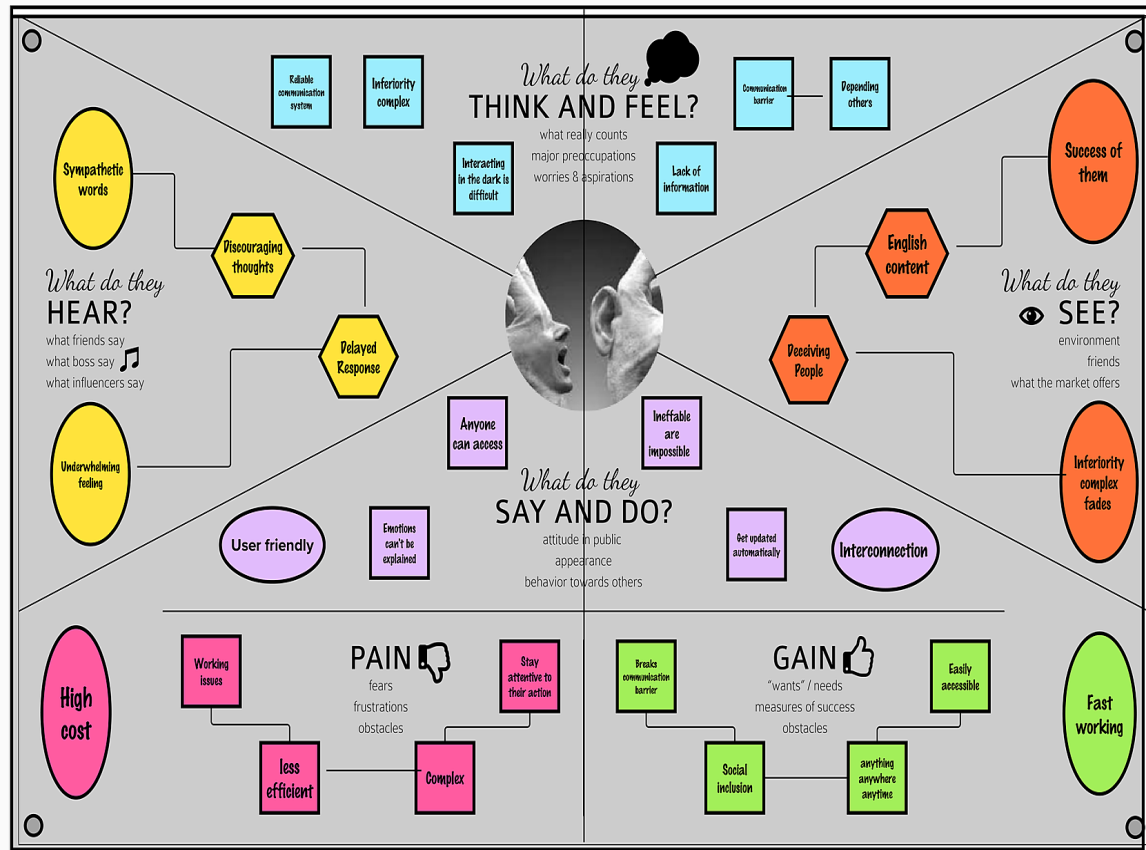

3.1 EMPATHY MAP CANVAS:

Empathy Map Canvas

Gain insight and understanding on solving customer problems.

1

Build empathy and keep your focus on the user by putting yourself in their shoes.

3.2 IDEATION AND BRAINSTORMING:

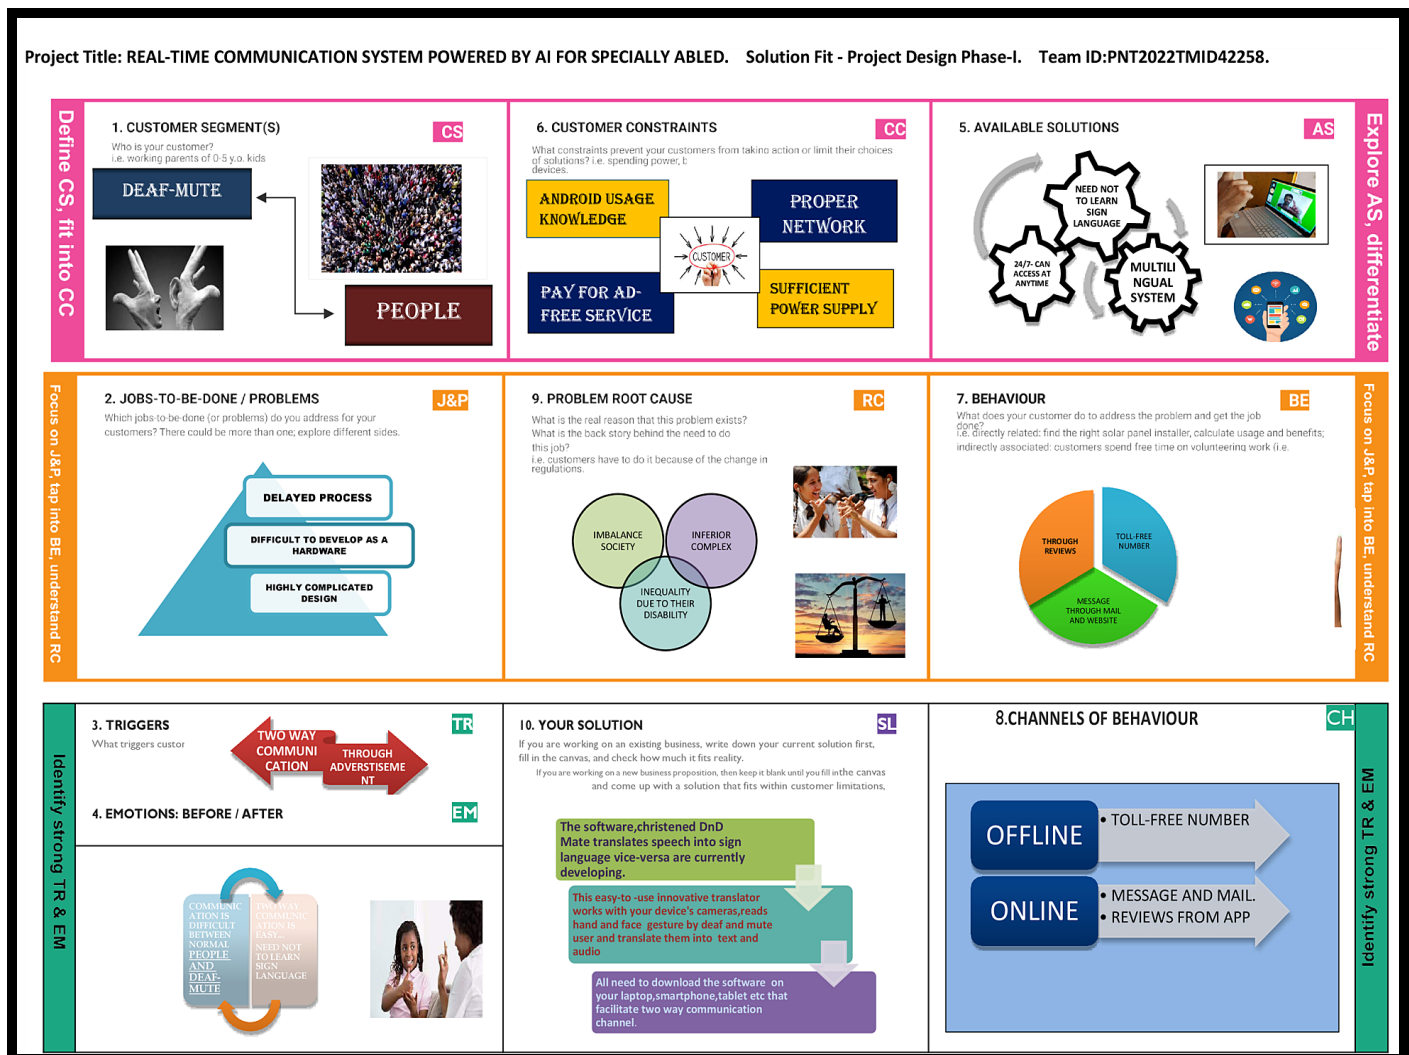

3.3 PROPOSED SOLUTION:

S NO	<u>PARAMETER</u>	<u>DESCRIPTION</u>
1.	Problem Statement (Problem to be solved)	How might we design and implement the system to overcome the communication barrier between normal people and speech-hearing impaired people?
2.	Idea / Solution description	The project aims to develop a system that converts sign language into a human hearing voice in the desired language to convey a message to normal people, as well as convert speech into

		understandable sign language for the deaf and dumb. We are making use of a convolution neural network to create a model that is trained on different hand gestures.
3.	Novelty / Uniqueness	<ol style="list-style-type: none"> 1. Enables Two-Way Communication System 2. Accurate Hand Gesture Recognition 3. Retrieval of High-Quality Audio 4. Multilingual system 5. Auto Updation 6. Disabled People get Benefited on a Major Scale 7. Learning Sign Language is not Necessary
4.	Social Impact / Customer Satisfaction	<ol style="list-style-type: none"> 1. Specially Abled People cannot be felt Underrated 2. Easily Accessible by Young and Adults 3. Breaks Inferior Complexity among the Society 4. Portable System 5. Cost Efficient 6. Live Communication 7. Communication Without Delay
5.	Business Model (Revenue	Based on the Popularity of the Application, the number of users gets increased so that Marketing

	Model)	profit can also be Increased
6.	Scalability of the Solution	Based on several users who need the service mostly get benefited from this application. This project can be expandable to reach more people which broadens the effectiveness for the users.

3.4 PROBLEM SOLUTION FIT:

4. REQUIREMENT ANALYSIS:-

4.1 FUNCTIONAL REQUIREMENTS:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through website Registration through Email Id and mobile number Registration through installing the application
FR-2	User Confirmation	Confirmation via Email verification Confirmation via mobile OTP verification
FR-3	User Login	Login to your account by entering your Email Id or mobile number and password
FR-4	User Interface	Interaction between the application and the user is made easy
FR-5	Account management	Easy recovery process by OTP verification by Email or SMS in case the account password is lost
FR-6	Database management	Storing frequently used sign language for easy communication

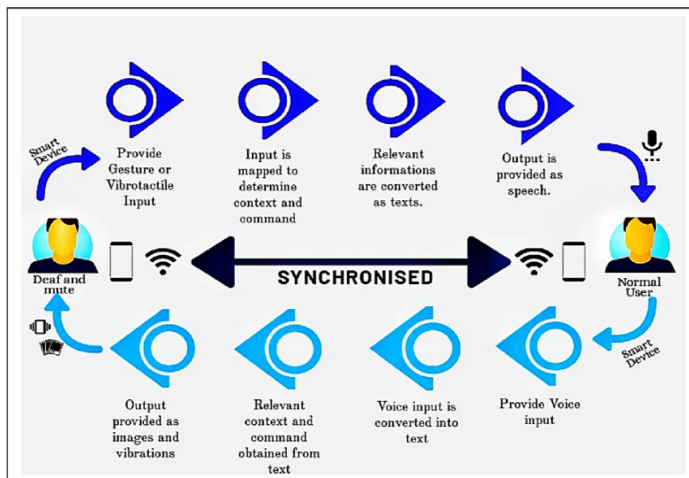

4.2 NON- FUNCTIONAL REQUIREMENTS:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Easy to use because of the user-friendly nature of the application
NFR-2	Security	The account cannot be misused due to the user verification process
NFR-3	Reliability	Highly reliable due to high accuracy
NFR-4	Performance	Because of very minimal errors, the performance is very high

NFR-5	Availability	The application is available to all and can be accessed by every deaf-mute people
NFR-6	Scalability	The application can be easily modified based on the user's preferences

5.PROJECT DESIGN:-

5.1 DATA FLOW DIAGRAMS:

5.3 USER STORIES:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Normal people and Deaf-mute people	Registration	USN-1	As a user, I can register for the application by entering my email, and password, and	I can access my account/dashboard	High	Sprint-1

			confirming my password			
		USN-2	As a user, I will receive a confirmation email once I have registered for the application			Sprint-1
	Dashboard		<p>Two options available</p> <p>Choose the option based on who uses the app.</p> <p>If you are normal person click the "normal people" option.</p> <p>If you are deaf-mute people click "deaf-mute" Option</p>		High	Sprint-1
Normal people			<p>Give access to camera to recognize the gestures</p> <p>Give access to</p>		High	Sprint-1

			microphone to give our message through voice			
Deaf-mute people			Give access to display to view the message sent by normal people.		High	Sprint-1

5.2 SOLUTION AND TECHNICAL ARCHITECTURE:

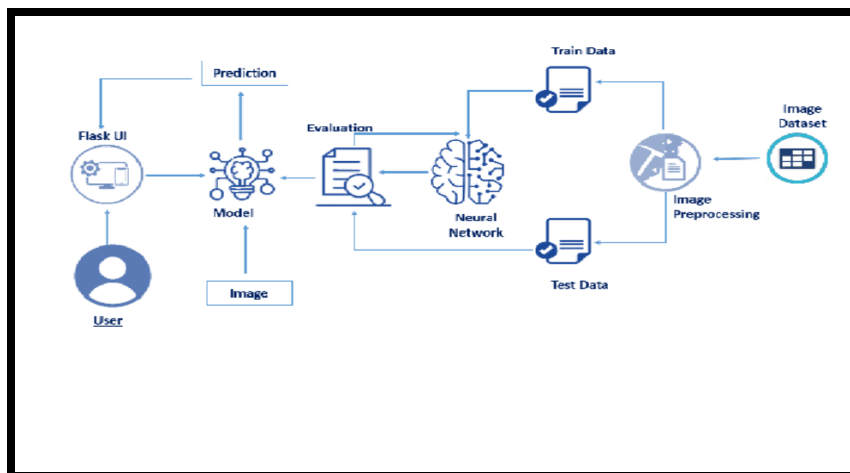

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1		User can interact using	HTML

	User Interface	Web UI and Mobile Application	
2	Application Logic-1	Get the image dataset and pre-process the images which will be used for building the model	Python
3	Application Logic-2	Building and testing the model	IBM Watson STT service
4	Application Logic-3	Building the application	Flask
5	Database	Data Type, Configurations etc	MySQL, NoSQL, etc.
6	Cloud Database	Database Service on Cloud	IBM DB2, IBM Cloudant etc.
7	File Storage	File storage requirements	IBM Block Storage or Other Storage Service or Local Filesystem
8	Machine Learning Model	Purpose of Machine Learning Model	Object Recognition Model, etc.
9	Infrastructure (Server / Cloud)	Application Deployment on Local System / Cloud Local Server Configuration: Cloud Server Configuration :	Local, Cloud Foundry, Kubernetes, etc.

Table-2: Application Characteristics:

S. No	Component	Description	Technology
1	Security Implementations	use of firewalls	e.g. SHA-256, Encryptions, IAM Controls, OWASP etc
2	Scalable Architecture	It can handle business growth	Web server tuning, Operating system

			tuning
3	Availability	Available to everyone	Open source framework
4	Performance	Without delay outputs can be viewed	Deep Neural network

6.PROJECT PLANNING AND SCHEDULING:-

6.1 SPRINT PLANNING AND ESTIMATION:

TITLE	DESCRIPTION	DATE
Literature Survey & Information Gathering	Literature Survey & Literature survey on the 10 SEPTEMBER 2022 Information Gathering selected project & gathering information by referring the, technical papers, research publications etc	18 SEPTEMBER 2022
Prepare Empathy Map	Prepare Empathy Map Canvas 10 SEPTEMBER 2022 to capture the user Pains & Gains, Prepare list of problem statements	18 SEPTEMBER 2022
Ideation	List the by organizing the 17 SEPTEMBER 2022 brainstorming session and prioritize the top 3 ideas based on the feasibility & importance.	23 SEPTEMBER 2022
Proposed Solution	Prepare the proposed solution document, which includes the novelty, feasibility of idea, business model, social impact, scalability	24 SEPTEMBER 2022
Problem Solution Fit	Prepare problem - solution fit Problem Solution Fit do	05 OCTOBER 2022
Solution Architecture	Prepare solution architecture Solution Architecture document	06 OCTOBER 2022
Customer Journey	Prepare the customer journey maps to understand the user interactions & experiences with the application (entry to exit).	07 OCTOBER 2022
Functional Requirement	Prepare the functional Functional Requirement document.	10 OCTOBER

		2022
Data Flow Diagrams	Draw the data flow diagrams and submit for review.	11 OCTOBER 2022
Technology architecture	Prepare the Technology Architecture technology architecture diagram.	1 NOVEMBER 2022
Prepare milestone and activity list	Prepare the milestones & Prepare Milestone & Activity activity list	15 NOVEMBER 2022
Project Development - Delivery of Sprint1, 2,3,4	Sprint 1-Collecting the data and processing the image Sprint 2-Testing the model Sprint 3-Building the application Sprint 4-Training the CNN model on IBM cloud	15 NOVEMBER 2022 15 NOVEMBER 2022 15 NOVEMBER 2022 In Progress...

6.2 SPRINT DELIVERY SCHEDULE:

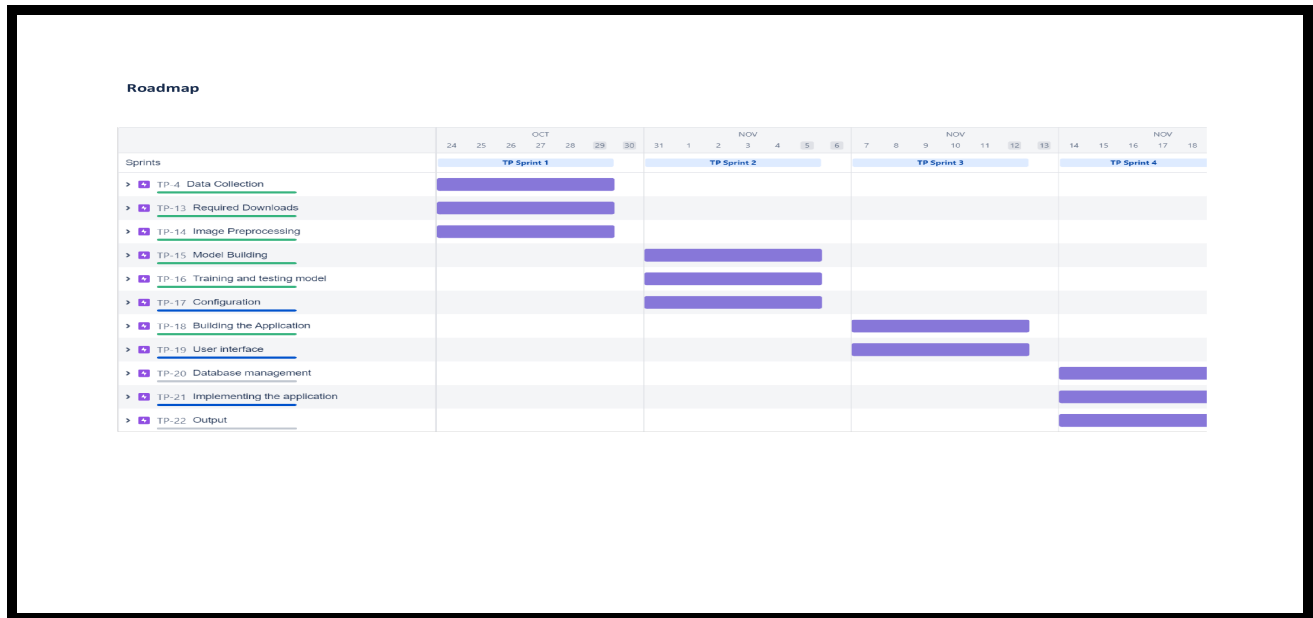

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Data Collection	USN-1	Collecting the required dataset for the project.	8	High	Kishore
Sprint-1	Required Downloads	USN-2	Downloading all the tools that are required for the project.	3	Low	Shuruthi
Sprint-2	Model Building	USN-3	Building the project model by downloading	2	High	Anandha

			required Python libraries.			
Sprint-1	Image Preprocessing	USN-1	Image data generation and training and testing the dataset.	8	Medium	Rebecca
Sprint-2	Training and testing the model	USN-2	Training the created project model and testing it.	5	Medium	Kishore
Sprint-2	Configuration	USN-1	Two options available- Choose the option based on who uses the app. If you are a normal person click the "normal people" option.	13	High	Anandha
Sprint - 3	Building the Application	USN-2	Building the final application using flask and HTML.	8	High	Rebecca
Sprint-3	User interface	USN-1	Give access to the microphone to give our message through voice	5	Low	Kishore
Sprint-4		USN-3	Give access to	3		Shuruthi

	Database management		the display to view the message sent by normal people		Medium	
Sprint - 4	Output	USN-3	Audio gets converted into sign language	8	High	Shuruthi

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	19	6 Days	24 Oct 2022	29 Oct 2022	19	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	13	6 Days	07 Nov 2022	12 Nov 2022	13	12 Nov 2022
Sprint-4	19	6 Days	14 Nov 2022	19 Nov 2022	19	19 Nov 2022

```

In our society, we have people with disabilities. The technology is developing day by day but no significant developments are undertaken for the betterment of these people. Communication between deaf-mute and a normal person has always been a challenging task. It is very difficult for mute people to convey their message to normal people. Since normal people are not trained on hand sign language. In emergency times conveying their message is very difficult. The human hand has remained a popular choice to convey information in situations where other forms like

speech cannot be used. Voice Conversion System with Hand Gesture Recognition and translation will be very useful to have a proper conversation between a normal person and an impaired person in any language.

OUTPUT:

The screenshot displays the IBM Watson Studio web interface. The browser address bar shows the URL: `dataplatform.cloud.ibm.com/analytics/notebooks/v2/7e5306db-1f1b-4279-81e7-294135695505?projectid=08d1223a-e9ce-4568-a347-6cb513e58d5f&context=cpdaas`. The interface includes a top navigation bar with tabs for 'Welcome to Proj...', 'Chat with mentor', 'IBM-Project-185...', 'Identity & Access...', 'IBM Watson Studio', 'AI code - IBM W...', 'ApiRequestFailu...', and 'WhatsApp'. Below this is a search bar and user information for 'Anandhapriya R's Account' in 'Dallas'. The main workspace shows a Jupyter Notebook with the following code and output:

```
In [23]: client = APIClient(url_credentials)
client

Out[23]: <ibm_watson_machine_learning.client.APIClient at 0x7f369c6671f0>
```

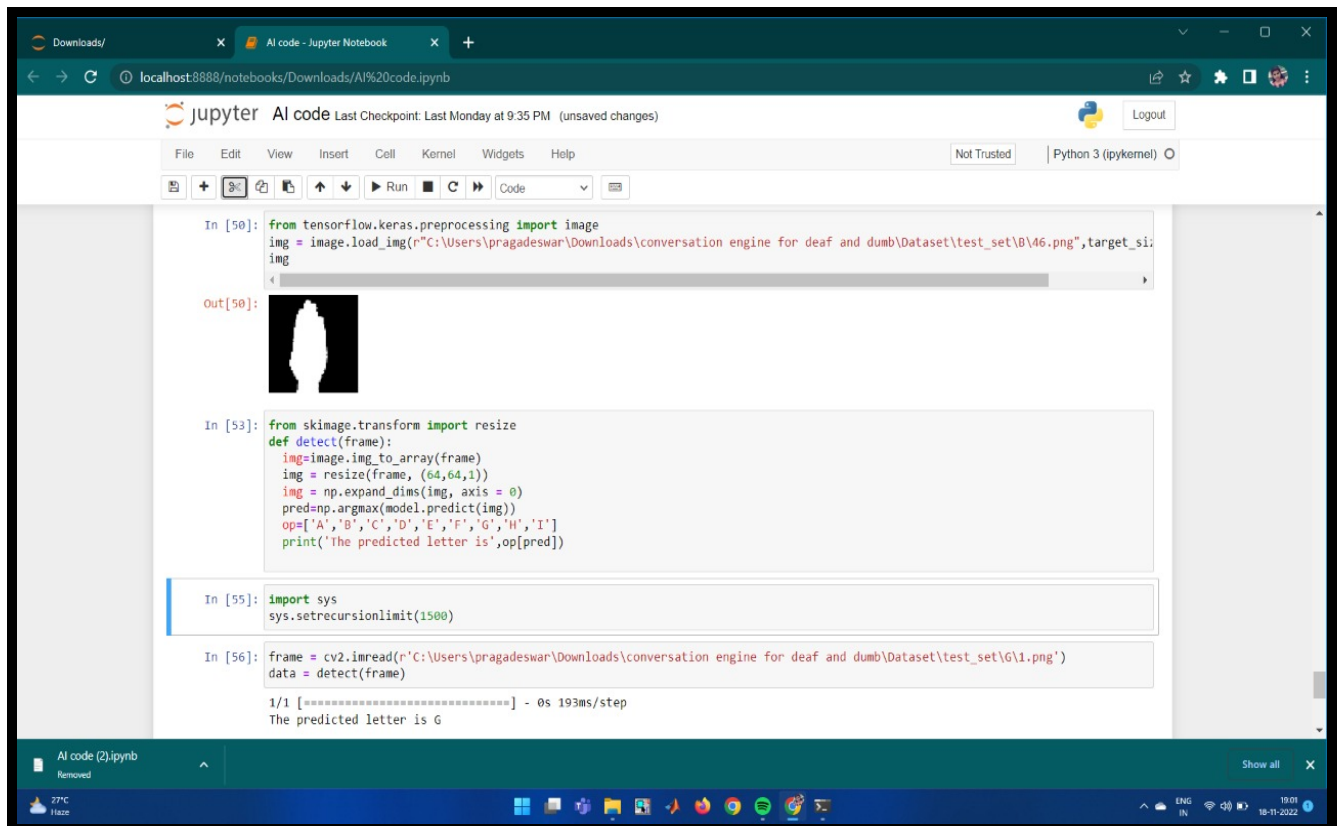

```
In [25]: #store the model
import client
model_details = client.repository.store_model(model='image.Classification.model_new.tgz',meta_props={
    client.repository.ModelMetaNames.NAME: "CNN",
    client.repository.ModelMetaNames.TYPE: "keras_2.2.4",
    client.repository.ModelMetaNames.SOFTWARE_SPEC_UID:software_spec_uid
})
model_id = client.repository.get_model_uid(model_details)
```

The output shows a `ModuleNotFoundError` traceback:

```
ModuleNotFoundError: Traceback (most recent call last)
/tmp/wsuser/ipykernel_164/4021805517.py in <module>
      1 #store the model
----> 2 import client
      3 model_details = client.repository.store_model(model='image.Classification.model_new.tgz',meta_props={
      4     client.repository.ModelMetaNames.NAME: "CNN",
      5     client.repository.ModelMetaNames.TYPE: "keras_2.2.4",
      6     client.repository.ModelMetaNames.SOFTWARE_SPEC_UID:software_spec_uid
      7 })
      8 model_id = client.repository.get_model_uid(model_details)

ModuleNotFoundError: No module named 'client'
```

The bottom of the screen shows a Windows taskbar with the date and time: 21:38, 15-11-2022.

8. TESTING:-

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	10	4	2	3	20
Duplicate	1	0	3	0	4
External	2	3	0	1	6
Fixed	11	2	4	20	37
Not Reproduced	0	0	1	0	1
Skipped	0	0	1	1	2
Won't Fix	0	5	2	1	8
Totals	24	14	13	26	77

3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	7	0	0	7
Client Application	51	0	0	51
Security	2	0	0	2
Outsource Shipping	3	0	0	3

Exception Reporting	9	0	0	9
Final Report Output	4	0	0	4
Version Control	2	0	0	2

9.RESULTS:-

9.1 PERFORMANCE METRICS:

The screenshot displays a Jupyter Notebook titled "AI code (1) (autosaved)" running on a Python 3 (ipykernel). The notebook contains the following code and output:

```
In [19]: model.save('aslpng1.h5')
```

```
In [20]: print(model.summary())
```

Model: "sequential"

Layer (type)	Output Shape	Param #
conv2d (Conv2D)	(None, 62, 62, 32)	320
max_pooling2d (MaxPooling2D)	(None, 31, 31, 32)	0
flatten (Flatten)	(None, 30752)	0
dense (Dense)	(None, 512)	15745536
dense_1 (Dense)	(None, 9)	4617

=====

Total params: 15,750,473
Trainable params: 15,750,473
Non-trainable params: 0

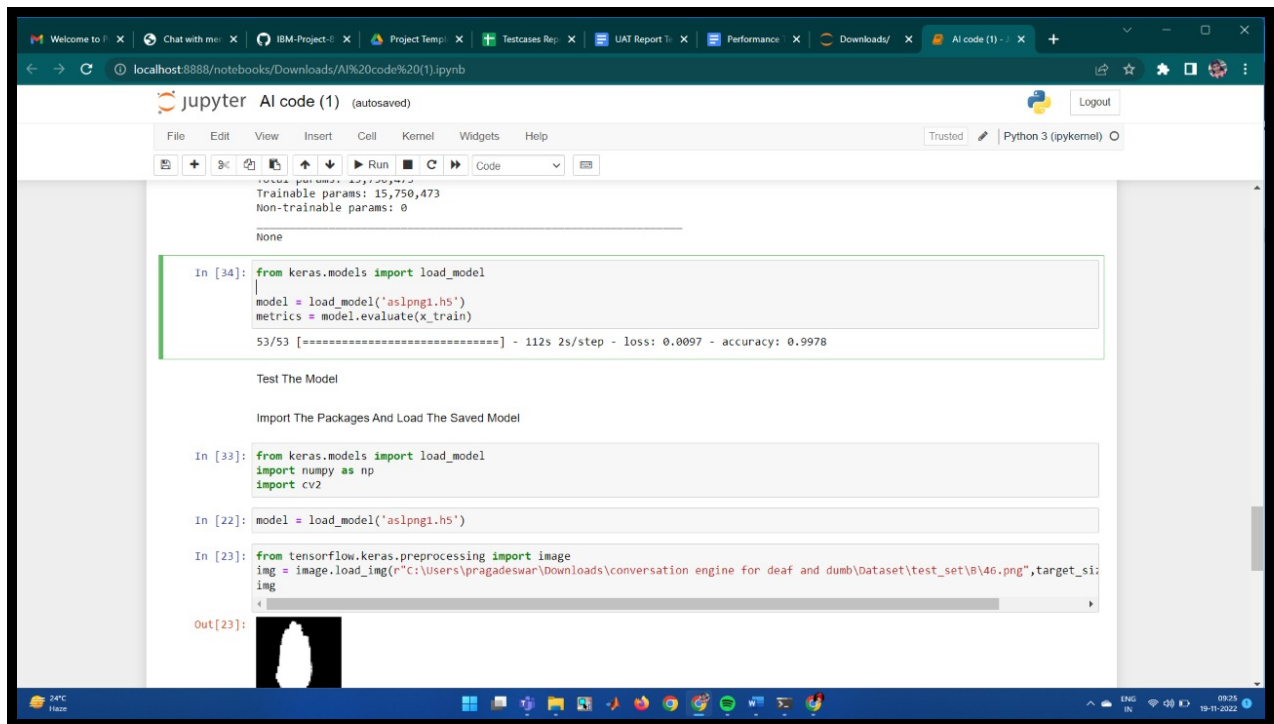

None

Test The Model

Import The Packages And Load The Saved Model

```
In [21]: from keras.models import load_model
import numpy as np
```

The interface includes a standard menu bar (File, Edit, View, Insert, Cell, Kernel, Widgets, Help) and a toolbar with icons for adding cells, running, and other notebook functions. The bottom status bar shows the system temperature (23°C), time (08:54), and date (19-11-2022).

This screenshot shows a Jupyter Notebook interface with the following content:

- Trainable params: 15,750,473
Non-trainable params: 0
- None
- Code cell [34]:

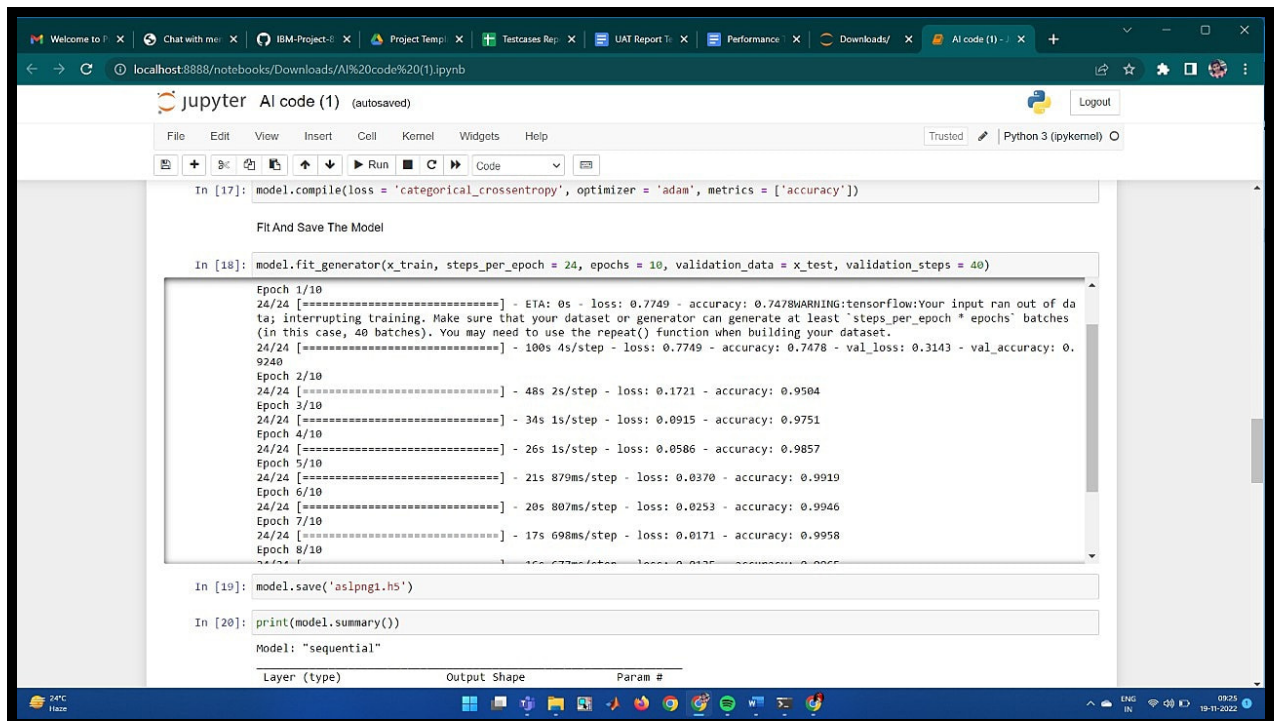

```
from keras.models import load_model
model = load_model('as1png1.h5')
metrics = model.evaluate(x_train)
```

53/53 [=====] - 112s 2s/step - loss: 0.0097 - accuracy: 0.9978
- Text: "Test The Model"
- Text: "Import The Packages And Load The Saved Model"
- Code cell [33]:

```
from keras.models import load_model
import numpy as np
import cv2
```
- Code cell [22]:

```
model = load_model('as1png1.h5')
```
- Code cell [23]:

```
from tensorflow.keras.preprocessing import image
img = image.load_img(r"C:\Users\pragadeswar\Downloads\conversation engine for deaf and dumb\Dataset\test_set\B\46.png",target_size=(256,256))
img = image.img_to_array(img)
img = np.expand_dims(img,axis=0)
```
- Output [23]: A small image of a person's face.

This screenshot shows a Jupyter Notebook interface with the following content:

- Code cell [17]:

```
model.compile(loss = 'categorical_crossentropy', optimizer = 'adam', metrics = ['accuracy'])
```
- Text: "Fit And Save The Model"
- Code cell [18]:

```
model.fit_generator(x_train, steps_per_epoch = 24, epochs = 10, validation_data = x_test, validation_steps = 40)
```

Epoch 1/10
24/24 [=====] - ETA: 0s - loss: 0.7749 - accuracy: 0.7478WARNING:tensorflow:Your input ran out of data; interrupting training. Make sure that your dataset or generator can generate at least 'steps_per_epoch * epochs' batches (in this case, 40 batches). You may need to use the repeat() function when building your dataset.

PROS:

We are making use of a convolution neural network to create a model that is trained on different hand gestures. An app is built which uses this model. This app enables deaf and dumb people to convey their information using signs which get converted to human-understandable language and speech is given as output. Can access the app all time whenever we need to communicate. portable anywhere and also less maintenance cost.

CONS:

Complex to make a live communication because some delay occurs to make a two way communication. Works only in ONLINE mode.so network facility is needed all time.Tedious to setup sign language information. Requires battery power .

11.CONCLUSION:-

The project aims to develop an AI model that converts sign language into speech that can be understandable by people and vice-versa to specially abled people.This model brings changes among our society and build communication between specially challenged people and normal people and breaks the discrimination shown towards specially abled people and they will not feel underrated in our society.

12.FUTURE SCOPE:-

Real-time communication has been impacting global industries to procure 100 times productivity and revenue. Information exchange is quicker and more efficient, and the emergence of push notifications can even accelerate the entire communication process.

Messaging platform can simplify your operations by connecting your internal and external departments and consolidating all data and conversation history into channels. Consequently, this gives you and your team uninhibited access to information and discussions necessary to make well-informed choices.Hence people can be highly benefited through this process
